

Laszlo Theory: Core Principles Ranked

#1: Evolution as a Circular Force (Laszlo Loop)

- Core Insight: Humans both evolve from and shape their environment - forming a feedback loop.
- Why This Matters: This is the foundation of the theory, reframing evolution from passive to intelligent. Predictive evolution emerges from this principle.

#2: Human Uniqueness in Escaping Planetary Fate

- Core Insight: No other species has the capability to escape extinction by leaving Earth.
- Why This Matters: It justifies space expansion as a biological imperative, not just ambition.

#3: Engineered Evolution via Selective Pressure

- Core Insight: A species that shapes its environment can intentionally shape its own evolution.
- Why This Matters: This formalizes a future where humanity designs itself, combining biology and engineering.

#4: DRD4-7R and the Genetic Drive to Roam

- Core Insight: The 'wanderlust gene' explains humanity's inherent drive to explore and colonize.
- Why This Matters: Ties evolutionary psychology to long-term space colonization, grounding the theory in genetics.

#5: Cosmic Divergence of Humanity

- Core Insight: Humans will evolve so differently in space that they become alien to one another.
- Why This Matters: A compelling, long-term outcome - but more a result than a core driver.
